CRESTLINE WELL CASE STUDY

From Strong Performance to a Compelling Sales Story

Marketing Coordinator Skill Assessment | Oct 2026

To: Megan

Subject: Crestline Case Study | Recap & Next Steps

Hi Megan,

Thanks for sending this over. I've pulled together the key details and next steps for the Crestline case study so we can keep everything moving toward the conference deadline.

For the Midland conference, we'll develop a polished, print-ready case study that gives the sales team a strong leave-behind and highlights the value delivered through the Crestline well performance.

Key performance points captured:

- Curve + lateral completed in one run
- **One BHA, no trips**
- Approx. **10,500 ft** lateral
- Average lateral performance of **92 ft/hr**
- Approx. **15% faste**r than surrounding wells
- Completed approx. **4.5 days ahead** of plan

Given the current pricing pressure in the market, we'll focus the story on measurable performance and efficiency, giving the sales team a way to communicate value beyond day rate alone.

I'll work backward from the **9th printer deadline**, building in time for creative development, review, revisions and final approval ahead of the conference on the **14th–16th**.

Before moving into creative, I'll confirm the final performance data, available pad photography, print specifications, and any approvals required to use Crestline's name and results externally.

I've also captured the request to refresh the other three service-line one-pagers. I'll keep those as a separate workstream so they don't impact the Crestline deadline, and we can confirm their timing separately.

Once those items are confirmed, I'll brief the creative team and move the case study into development.

Thanks, Megan, safe travels!

Best,
Pardis

02.EXECUTION PLAN & TIMELINE

Crestline Case Study

Objective

Develop a polished, print-ready Crestline well case study for the sales team to use as a high-value leave-behind at the Midland conference. The piece should demonstrate measurable operational performance and reinforce the value of efficiency in a market experiencing increased price pressure.

EXECUTION PLAN

Working backward from the 9th print deadline

01
Confirm & Collect

Day 1–2

- Confirm final performance data, intended audience, print quantity/specifications, Crestline approval requirements, available photography and any brand/content restrictions.
- Gather approved Crestline performance data, pad photography, brand assets and any supporting technical information required for the case study.

02.
Brief & Develop

Day 2-4

- Finalize the creative brief and align Copy and Graphic Design on objective, audience, messaging hierarchy, format and production deadline.
- Develop concise case-study copy and initial design. Lead with the strongest proof points: one BHA/no trips, 10,500-ft lateral, 92 ft/hr, 15% faster performance and 4.5 days ahead of plan.

03.
Internal QA & Client Review

Day 4-5

- Review copy, technical figures, hierarchy and design internally. Verify all performance claims against approved source data before anything reaches the client.
- Send the first proof to Megan/stakeholders with a clear approval deadline and consolidated feedback request.

04.
Revise & Approve

Day 6-7

- Incorporate consolidated feedback and obtain final approval on copy, data, imagery and design.

05.
Preflight & Print Handoff

By the 9th

- Complete final production QA: dimensions, bleed, image resolution, colour settings and print specifications. Release approved print-ready artwork to the printer.
- Confirm receipt and production schedule with the printer and resolve any production questions immediately.

BEFORE THE CONFERENCE · Confirm printed materials are delivered and ready for the Midland conference (14th–16th).

PROJECT PRIORITIES & SCOPE

PRIMARY PRIORITY
CRESTLINE CASE STUDY

Conference-critical deliverable. Protect the 9th print deadline and prioritize required inputs, approvals and creative resources accordingly.

SEPARATE WORKSTREAM
SERVICE-LINE ONE-PAGERS

Capture Megan's request to refresh the three existing one-pagers, but confirm scope and timing separately so they don't put the Crestline deliverable at risk.

PARKED
FUTURE CASE-STUDY SERIES

No action at this stage. Megan explicitly positioned the broader "one case study per well" idea as a next-quarter conversation.

STRATEGIC CONTEXT
MARKET PRICE PRESSURE

Not an additional deliverable. Use the competitive day-rate pressure to inform the case-study messaging: emphasize measurable performance, efficiency and business value, rather than competing on price alone.

Coordinator approach: Protect the critical deadline, separate immediate deliverables from future ideas, and use business context to guide, not expand, scope.

03.CREATIVE BRIEF

Crestline Well Case Study

Printer deadline: 9th

THE ASK

Create a premium, print-ready case study for the Midland conference that gives Sales a credible, high-value leave-behind built around Crestline's performance results.

BUSINESS CHALLENGE

Competitors are aggressively reducing day rates, putting Sales under increasing price pressure. The case study should help shift the conversation from price alone to performance, efficiency and value delivered.

AUDIENCE

Conference prospects and industry decision-makers involved in drilling operations.
Specific audience roles to be confirmed with Megan.

CORE MESSAGE:

Performance creates value beyond the day rate.

Messaging direction:
Use Crestline's results to demonstrate how stronger operational performance can translate into meaningful time savings.

PROOF POINTS

- One run: curve + lateral
- One BHA, no trips
- Approx. 10,500 ft lateral
- 92 ft/hr average lateral performance
- Approx. 15% faster than comparable surrounding wells
- Approx. 4.5 days ahead of plan

All claims subject to final technical/client verification.

STORY STRUCTURE

Challenge → Execution → Performance → Business Impact
Technical metrics establish credibility; the time saved communicates why the performance matters.

CREATIVE DIRECTION

Premium, technical and credible — not overly promotional.
Use strong visual hierarchy around the performance numbers and approved Crestline pad photography where available. The piece should feel substantial enough to serve as a conference leave-behind rather than a lightweight brochure.

CTA

Make the next conversation easy: sales contact / website / QR code to be confirmed.

DELIVERABLE

Premium printed case study + print-ready artwork

INFORMATION GAPS & CLARIFICATIONS

Items to confirm before the case study moves into final production

01 .PERFORMANCE DATA

Are 10,500 ft, 92 ft/hr, 15% faster and 4.5 days ahead of plan the final approved figures?
What is the comparison set behind the 15% faster claim?

02.CLIENT APPROVALS

Do we have Crestline's approval to use their name, project data and results externally?
Can the drilling engineer's comment be referenced publicly?
Is there an approved cost-savings figure tied to the 4.5 days saved?

03.ASSETS

What Crestline pad photography is available?
Is the photography cleared for external use?
Are there any additional technical/brand assets we should work from?

04.AUDIENCE & CTA

Who is the primary conference audience: technical, operational, commercial, or a mix?
What should the next action be after reading: sales contact, website or QR code?

05.PRINT & APPROVAL PROCESS

Confirm format, quantity, stock/finish and printer specifications.
Who provides final technical and creative approval before files go to print?

Approach: Consolidate questions into one client touchpoint to minimize back-and-forth and protect the 9th print deadline.

Thank You Very Much
